CLAIMS

5

30

- 1. Method to produce an austenitic alloy, c h a r a c t e r i z e d in that an austenitic substrate alloy of low Al content is coated with at least one layer of an alloy of higher Al content at a temperature between 100 °C and 600 °C, so that the resulting product has an Al content of 4,5–12 % by weight, preferably 5,5–12 % by weight.
- 2. Method to produce an austenitic alloy according to claim 1,
- 10 characterized in that a substrate alloy having the following composition (in % by weight):

20–70 % of Ni, 15–27 % of Cr, 0–5 % of Al, 15 0–4 % of Mo and/or W, 0–2 % of Si, 0–3 % of Mn, 0–2 % of Nb, 0–0,5 % of Y, Zr and/or Hf, 20 0–0,1 % of one or more rare earth metals (REM)

balance Fe and normally occurring impurities

is coated with at least one layer of a composition of higher Al content.

- 25 3. Method for the manufacture of an austenitic alloy according to any one of claims 1–2, c h a r a c t e r i z e d in that the at least one layer is aluminium.
 - 4. Method for the manufacture of an austenitic alloy according according to any one of claims 1–2, c h a r a c t e r i z e d in that the at least one layer is an aluminium-based alloy.

WO 2005/064031 PCT/SE2004/002017

20

- 5. Method for the manufacture of an austenitic alloy according to any one of claim 4, in which the aluminium-based alloy is Al having 0,5 to 25 % by weight of Si.
- 6. Method for the manufacture of an austenitic alloy according to any one of claims 1–5, wherein the austenitic final product has the following composition (in % by weight):

0-0,2 % of C, 0-0,1 % of N, 10 25-70 % of Ni, 15-25 % of Cr, 4,5-12 % of Al, 0-4 % of Mo and/or W, 0-4 % of Si, 15 0-3 % of Mn, 0-2 % of Nb, 0-0,5 % of Ti, 0-0,5 % of Y, Sc, Zr and/or Hf, 0-0,2 % of one or more rare earth metals (REM) such as, e.g., Ce, 20 La, Sm,

7. Austenitic alloy with an AI content of 4,5–12 % by weight, c h a r a c t e r i z e d in that it is manufacturable by the method according to any one of claims 1–6.

balance Fe and normally occurring impurities.

8. Use of the method according to any of claims 1-6 for producing material to be used in high temperature applications such as supporting material in catalytic converters and resistive heating.
